

## **ITS Version 5.0 | New Uploading Tool**

### **Welcome to Version 5.0**

A little bit of change is good... Really, it is! Visual fine tuning, addressing speed issues, increased security, increased functionality, a multitude of micro bugs, some more significant bugs and new components are just a few of the things that Version 5.0 touches.

### **Uploading (New Add on Component)**

You will now see a **FILES** button in various locations of Version 5.0. This is a new add on feature that has been built to allow users to add documents to loads, drivers, carriers, trucks, trailers customers and so on. Once you upload the document, it can be emailed or saved for future reference. There are no limits to how much you can upload and the uploaded document stays in the system until you delete it! All users can upload and access your files for a fixed rate of \$10.00 per month per account. Contact us today to have this tool turned on!

### **Increased Server Speeds and Data Backups**

With the new update, we have upgraded to a server that is more than capable of carrying us through double our current customer base. Along with the increased server speeds and capacities, we revised our backup procedures and frequencies to better suit our rate of growth. Additional hardware redundancies have been added as well to limit any downtime due to potential hardware failures.

### **New Look and Feel**

Almost immediately you will notice a change in the window designs. This may appear to be a small change but in fact, it is fairly significant. By changing the design and style of the windows, we have made the site more consistent for future development which will allow for faster development of new components. Besides that, we think it looks pretty cool!

### **Bugs**

With any update, there are inevitably bugs and minor issues. We have done more testing on this release than any other. That being said, there will still be bugs. If you find something that is not right, please email [david@its-dispatch.com](mailto:david@its-dispatch.com) and make sure that you mention what internet browser and version you are using. You can also use the **Online help** located at the top right of the Main Dispatch Board. Our support team will be all hands on deck today to deal with any issues that might come up.
